A small helper program that works with Windows 7 and 8 It comes with a few basic features It has an easy interface CodeMaid is a small and simple code organizer program. All you need is to open its interface and select files and folders. Later, you can do a variety of actions to these files and folders. CodeMaid is an all-in-one utility that includes the majority of the functionalities. It helps you to organize code (C, C++, ASP, Visual Basic, Delphi) files. You can select various programming languages and create code bookmarks, mark a folder as an archive, or copy projects to other disk locations. There are also a lot of keyboard shortcuts that help you perform multiple tasks quickly and without any effort. CodeMaid supports project importing from SVN, Git and TFVC. The program comes with an excellent user interface and a large set of standard options. Since CodeMaid is a small program, you can run it directly from a portable USB flash drive without any installation. Despite its small dimensions, it comes with a lot of features. Svengaard Firewall is a useful tool to secure the Internet connection of your computer. Svengaard Firewall is a lightweight firewall application that you can install on Windows XP, Windows Vista, Windows 7, Windows 8 and Windows 10. When you install the tool, it puts a control panel on your desktop. The panel is divided into two sections: the left one has the Firewall icon. The icon allows you to turn the tool on and off. To start the program, you have to open it using the icon on your desktop. The panel displays the list of currently active networks and their bandwidth settings. When you click on a network, the program indicates the status of the device (connected or not). You can change the settings of the panel by clicking on the appropriate buttons. By default, the tool enforces all ports to be closed. In addition, you can define which interfaces will be accessible through the tool. Besides, you can choose the level of security for the applications. Svengaard Firewall comes with the following security settings: - Application : you can allow a particular application to use the Internet connection. - All Apps : all of the applications on your computer can connect to the Internet without restrictions. - In Active Mode : when you are working with a network, the program will establish a connection to the network every time you
