Now, use the registration code to activate the software. Use the software and create your architecture models. Finally, the users need to save their file and exit the software. That's it. Just like the previous version, the users also need to use the registration code to activate this software.Q: How can I find a Verilog block simulator? I am writing a Verilog simulation script in Python which, to the best of my knowledge, can only be done in Verilog-XL. However, I have this one weird requirement: I would like to simulate a block-level simulator. I know that Verilog-XL has a binary-level simulator, and a simulator that you can use to simulate a piece of hardware on the fly. But what I would like to do is to be able to construct and execute a simulation while holding a
