Inscriptions en stanley comic. Andy Robinson review. Dirichlet-series algorithms, geometric realisation and 3-manifold topology, arithmetic of number fields, and dynamics. [ edit ]Q: How can I inject a session variable in the view and in the controller? I've an app with two controllers and two views. Both controllers inherit from a base controller and they have common code. The app uses the MasterDetail template. The common code in the two controllers and two views is this: `public void PopulateList(object p, AjaxRequestState a, AjaxControlToolkit.AutoComplete extender) { var query = p as string; string var1 = (string) Session["variable1"]; if (query!= "") { //Do something with var1 } }` I can set the variable in the view using this: `var1 = "some value"`; How can I inject the variable in the view? And how can I inject the variable in the base controller? A: You could create a variable for this in your base controller and set the value in the master/detail template on page load. You would just need to add the `@page` in your master template. Then in your master/detail template you could use the following code: `@Page.MasterVariables.Add("Var1", ViewData["Var1"] as string);` Then in your code behind/view you can access the values via the property set in the master template like this: `string Var1 = (string)Page.MasterVariables["Var1"];` This way you can set the value of the variable on page load or any other place you want and then retrieve it in the view by the variable name in the master template. As mentioned in the comments, using a view model could be a more appropriate solution for this. A: @Kent suggested this is a good approach, but you should note that this relies on your page being "compiled" and

Correlation between recurrence and regional lymph node metastases in primary gastric carcinoma. In the course of treating primary gastric cancer, it is important to predict the probability of local and distant metastasis. To investigate the correlation between the incidence of lymph node metastasis and recurrence of gastric cancer, we reviewed the medical records of 849 patients who underwent surgery for gastric cancer in our institution. Twenty-two (2.6%) of the 849 patients had lymph node metastases at the time of initial surgery, and 14 of these 22 patients (63.6%) had recurrence of cancer at the porta hepatis. In contrast, 538 (64.3%) of the 849 patients had no lymph node metastasis at the time of initial surgery, and 48 of these 538 patients (9.3%) had recurrence at the porta hepatis. This difference in the incidence of recurrence was statistically significant (p Q: Should I delete my old short questions? I have a few questions that were initially very short (usually a single-word question). They have since been edited, but are still too short to meet the bare minimum of 10 characters required for an accepted answer. I was thinking about editing them to remove the single-word question and repost them with answers, but am worried that this would attract downvotes and I would have to go through the edits again to remove the single-word questions. I am reluctant to delete them because I have been satisfied with them 2d92ce491b
