Description of the Prior Art As a conventional developing device, there has been known a developing device for use in an electrophotographic copying machine, said device comprising a toner carrier for conveying a two-component developer material, a first developer contained in the toner carrier being a two-component developer material comprising a fine toner and a carrier particle, and a second developer contained in the toner carrier being a color toner. The developing device of this type is arranged such that the two-component developer material is carried to a first developing station from which the toner of the two-component developer material is transferred from the toner carrier to the photosensitive medium to develop the latent image thereon, the color toner being transferred to a second developing station from the toner carrier. With this arrangement, the color toner is not transferred to the first developing station.
