The KEYMACRO utility is a utility which enables you to generate key macro from characters with number value in front of them (eg: "13", "16" or "24") and these numbers (eg: 1, 2 or 4). Example: key = 13 + 1 = 14 key = 16 + 2 = 18 key = 24 + 4 = 28 It will create a variable called key with the specified value, which you can use to generate further macros. The program will generate key macros from characters and numbers with minimal error or mistakes and works on all versions of Windows. Key Macro Password Utility Description: The Key Macro Password Utility (KEYSERVER) provides the ability to create a password protected Key Macro file. The program will create a password protected Key Macro file with the specified name. The password used for the file should be stored in a variable. Once this file has been created, you should be able to work with the file using the KEYSERVER utility. The program will use the PASSWORD variable to create the password and to compare it with the file content. Once the program finds a match in the text, it will consider the file to be password protected. The file can be read using the KEYSERVER utility or manually saved. The program will use the PASSWORD variable to create the password and to compare it with the file content. Once the program finds a match in the text, it will consider the file to be password protected. The file can be read using the KEYSERVER utility or manually saved. The file will be stored in this directory C:\Data\System32\cmd.exe /c start /b "C:\Program Files\Draper Inc.\Key Macro Password Utility\KEYSERVER.exe" /f /key="C:\Program Files\Draper Inc.\Key Macro Password Utility\KEYSERVER.exe" /name="\$(\$NAME)" /pwd="\$(\$PASSWORD)" >nul Scripting: You can save your Draper Screen Serial Control Utility batch file as a scripting file. You can use another programming language to run a script. The batch file would then contain the following lines: draperscreenserialcontrol.bat #Runs the script start /b /wait
