Q: VBA Power Query - Select Unique Values with Values from Multiple columns I am trying to select unique values from multiple columns in a table. I have a table with multiple columns that has the following values : EmpID Status DeptID 1 A 1 2 A 1 3 A 1 3 A 2 I need to select unique values from all three columns in the table based on the EmpID. I have written the following code to get the same values as above but the results are the same. I am not sure what I am doing wrong? let Source = Excel.CurrentWorkbook()[[Name="Table"]][Content], #"Changed Type" = Table.TransformColumnTypes(Source,{{"EmpID", Int64.Type}}, #"Changed Type" = Table.SelectRows(#"Changed Type", each [EmpID] 0), #"Distinct" = Table.Distinct(#"Changed Type"), #"Renamed Columns" = Table.RenameColumns(#"Distinct",{"UniqueID", "UniqueID.2"}, {"EmpID", "EmpID.1"}), #"Added Index" = Table.AddIndex(#"Renamed Columns", 1, 1),
