The direct effect of taxane treatment on drug sensitivity in human breast cancer cell lines. To determine the direct effect of taxanes on sensitivity to these drugs, the cytotoxicity of paclitaxel and docetaxel was compared in three human breast cancer cell lines. For paclitaxel and 10 microM etoposide, there was a significant difference in the cytotoxicity of the three cell lines and a parallel increase in p53-expression. For docetaxel and 10 microM etoposide, the difference in cytotoxicity between the three cell lines was not significant. These data suggest that some but not all breast cancer cell lines are directly sensitive to paclitaxel but not to docetaxel. What Donald Trump has never been able to understand is that the vast majority of American citizens find his conduct and character unfit for the office of the presidency. That's why the only legitimate outlet for Trump's base is to try and reach them directly through his Twitter account, in hopes that they'll be more likely to vote in 2020, and thereby keep their hero in the White House.
