

. . . It scans the entire disk or partition and recovers the deleted files quickly . . . Thanks for sharing. A: That's an old tool, and, not a very good one, but it's the only one I know of. My own recommendation is to use one of the dozen data recovery tools available online, many of them free. The invention relates to an electromagnetically actuatable drive connection between two parts of a vehicle and a method for adjusting a relative position of two parts of a vehicle. The invention, in particular, relates to a wheel suspension for vehicles.

The wheel suspension has a drive connection with a hydraulic adjustment device for adjusting a relative position of two parts of a vehicle. One part of the drive connection can be connected to a suspension rod of the vehicle and the other part of the drive connection can be connected to the vehicle body. The invention furthermore relates to a vehicle with a wheel suspension with an electromagnetically actuatable drive connection. The invention furthermore relates to a method for adjusting a relative position of two parts of a vehicle. Q: How to get a value from variable that is assigned dynamically? I have a variable

that I define dynamically. The variable is defined like: `var myVariable = $('#myDiv').data('myVariable');` This is not a string, it is a int (int myVariable). I am trying to get that value from the variable, so I do: `var myValue = myVariable;` But I get undefined. What's the correct way to get a value from a variable? myVariable is just the ID of an element, not an object with properties.

So you need to get it's value: `var myValue = ($('#' + myVariable).data('myVariable');` Conflict of Interest Statement
