element softwareAn
environmental study
of porewater organic
carbon in unsaturated
fine soils in a mixed

temperate forest and adjacent grassland.

Soil-porewater organic carbon (C) plays an important role in the cycling of carbon and nitrogen in soils and is an important component in the response to environmental change.

It can be either bioavailable in the rhizosphere or not. In this study, organic C in porewater from unsaturated fine soils in mixed temperate forest and adjacent grassland was studied. Measurements were made before and after

a heavy rain event. Sequential soil and water sampling was made during a wet and dry season in the forest. Soil moisture was significantly correlated with porewater C concentration. Porewater C was

higher in the wet season than in the dry season. Soil moisture was the primary factor controlling the higher concentrations of porewater C in the wet season than in the dry season. Porewater C concentrations at 0-10 cm were

significantly higher than at 10-20 cm. Soil texture, bulk density, and soil water content were the major controlling factors of porewater C. After a heavy rain event, porewater C concentrations declined significantly

(P A Lot of Things
Change A Lot of
Things Change is the
seventh studio album
by Finnish rock band
Leningrad, released in
November 2013 in
Finland. It is the first
album to be released
since their
participation in the

Eurovision Song Contest in 2011. It also marks their first album to be released on their new record label, Stay With Me.

The album was produced by guitarist/producer Marko Perkkiö. The album will also be

released in a special collector's edition CD format in December. It includes a cover of the song "Breakout" by Bruce Springsteen, which had been included as a B-side on their single "Trolls in Love" earlier that year. Track listing

Personnel Leningrad Markus Joonas Seurakka
