When you are in the market for a platformer, you have a wide variety of choices. The most obvious path to take is to utilize your favorite console. The current version of the Nintendo Switch is not on that list. Nintendo has given a disclaimer that a lot of its recent software releases have been unannounced and there is no timeline for when they will be released. That being said, it is easy to take the next logical step and assume that Nintendo will eventually release its own version of the Switch. It would not be surprising if Nintendo does this at some point in the future. If this does happen, here are some of the most obvious reasons why Nintendo could produce its own version of the Switch. Instant sales If Nintendo chooses to release its own version of the Switch, it can instantly gain a huge amount of sales from Switch owners that are already aware of it. Nintendo games have always been popular and getting a version of its platform that can play Nintendo games is a major marketing and money-maker. A product like the Switch could potentially see an initial release of around \$100 and a year later, it would be selling for \$600 or even more. This initial success would make the initial sales of a Nintendo version of the Switch increase sales of the Switch by a great amount. The platform is also likely to eventually overtake the Xbox One and 2d92ce491b
