gearotic motion.hu and more time to work on and to try new things. Also we give the artists more freedom to express their ideas. So even if an artist doesn't like one of the designs we come up with, they can still change their mind and we do it for them. In the process of designing an industrial theme, the company has created specific colors, material and textures to evoke the feeling and mood of the product. "A combination of rigid, static graphics, combined with motion graphics (or movement) is intended to convey a sense of vitality to the product. Motion graphics, similar to moving parts or gears, can help solve the problem of how to visually represent a product's use in everyday life," explains Severson. The employees of Alva Common, where Sara Severson works, have been involved in the development and production of Alva Common's product design since it was created. "The design is inspired by Scandinavian design. This design is a long, continuous process, as it takes a lot of time. The design team consists of a mix of full-time employees and freelancers, including artists, graphic designers, and filmmakers," says Severson. Approach to the project Alva Common developed two different concepts for the company's product, both of which include a curved shape. The general form of the product, made of metal and glass, is not something we have come up with ourselves. The shape of the product is inspired by the industrial process in which it will be built. In Alva Common's process, the material is cut in a certain shape, then bent and bent again to create a final shape, and finally fitted with other parts. The main goal is to create something that feels unique and fresh. "We wanted to create a product that looks and feels industrial, but also something that can be taken out of the warehouse and handled
