-loaded print(' '.join(['', str(get\_ip\_address(transport\_ip)), '/ip/check.php'], [str(transport\_ip), "])) If it returns, e.g., 127.0.0.1 it means that there is no internet connection. Transport ip is the IP of the VPN server which the scapy.transport.UDPClient object is created in.

1. Field of the Invention The present invention generally relates to mounting brackets for mounting a light fixture to a support structure, and more particularly to mounting brackets for mounting a recessed downlight fixture to a ceiling surface, a wall surface, or a truss structure.

2. Description of the Prior Art A number of different ceiling mounting brackets are known in the prior art. Exemplary of such brackets are those described in U.S. Pat. Nos. 5,983,749 and 5,998,962. These brackets are designed to mount light fixtures on a ceiling of a structure, such as a residential home, a commercial office, or a house of worship. Also known in the prior art are track lighting assemblies for mounting track lights on a ceiling of a structure. Exemplary of such assemblies are those disclosed in U.S. Pat. Nos. 5,005,638; 5,228,073; 5,568,540; 5,689,458; and 6,032,923. In these prior art track lighting assemblies, the track lighting fixtures are mounted on a wall of the structure and are supported by a track lighting mounting bracket. U.S. Pat. No. 6,032,923 to Unlu et al. and U.S. Pat. No. 6,257,776 to Johnson et al. describe mounting assemblies for ceiling-mounted track lighting fixtures. In the mounting assemblies of these patents, the track lighting fixtures include an inverted T-shaped structure that extends through a ceiling opening. The track lighting fixture has a pair of mounting flanges, each of which is attached to the inverted T-shaped structure. The pair of mounting flanges and the inverted T-shaped structure are used to mount the track lighting fixture to a ceiling. The inverted T-shaped structure can be designed to be a permanent fixture in the ceiling
