Experimental study on the function of the human neurokinin-1 receptor gene in a neurological disorder. The neurokinin-1 receptor (NK1R) is known to play an important role in a variety of neurodegenerative diseases, and several polymorphisms in this receptor gene have been reported to be associated with such diseases. However, the mechanism by which these polymorphisms are related to disease remains unclear. To elucidate the role of the NK1R gene in a neurological disorder, we prepared a chimeric construct containing the entire human NK1R gene and introduced it into non-neuronal cells. 2d92ce491b
