I would like to detect if a given class inherits the SomeTrait trait. class Test { use SomeTrait; } If the Test class inherits the SomeTrait I would like to be able to execute a function. How can I achieve this? A: As of php7, you can use static method calls to do this. function SomeTrait::someStaticMethod(); A: You can't. You need a workaround. But you're not the first one asking for that. Compar
