Polyclonal B cell activation and expression of anti-apoptotic proteins in myeloma and Waldenström's macroglobulinemia. The malignant monoclonal proliferation of plasma cells in Waldenström's macroglobulinemia (WM) and myeloma (MM) may be mediated by B cell-dependent stimulation of polyclonal plasmacytoid cells. To elucidate the mechanism of this stimulation, surface markers of plasmacytoid cells and surface molecules present on MM cells were analyzed. The B cell-derived cytokines IL-2 and IL-4 were shown to up-regulate the expression of CD25 on plasmacytoid cells. Interaction with IL-2 or IL-4, via a CD25-dependent mechanism, resulted in the expression of Bcl-2 and the inhibition of apoptosis. These data indicate that anti-apoptotic proteins are expressed during the proliferation of plasmacytoid cells via the action of cytokines and may support the proliferation of malignant plasma cells. Participation of the catfish (*Silurus asotus*) hepatopancreas serine proteinase in phagocytosis.
