this section, we discuss some of the most common techniques for creating images in Photoshop and the layers system that makes Photoshop so powerful. Layers are one of the most powerful and versatile tools in Photoshop. They let you erase and combine layers, add effects, blend images, and apply filters. Basic tools The primary tools in Photoshop are the pencil tools and the Brush tool. The Camera tool is used for taking or capturing images, and the Eraser tool is used for erasing in Photoshop. In Photoshop, the "Drawing Tools" box on the Creative Tools panel is opened and visible only when you click the new Draw button at the bottom of the dialog box's default toolbox. To select more than one tool, press Ctrl and click the tool icons. To change the tool (pencil, paintbrush, eraser, or whichever tool you selected), click the Select tool in the Drawing Tools panel and hold down the mouse button, as shown in Figure 11-1. Then click a tool and release the mouse button. A tool tip appears on the tool you selected. Q: ListView Bind Data from DataTable with a Foreach loop This seems like a trivial question but I haven't figured it out. I have a DataTable (MyTable) and a ListView (ListView1). I load the data into the table with the code below. In this loop I am just querying table, but its purpose is merely to populate the DataTable. I want to display the data in the table (into the DataTable) into a ListView (the ListView is on Form1) in a foreach loop. It doesn't seem to recognize the ListView (ListView1) inside of the code when I try to bind the data from the DataTable in a foreach loop like below. This code is the only code that is relevant to this question. private void FillMyTable() { // This Loop LOADS THE DATA INTO DATA TABLE (MyTable) // It doesn't seem to be binding to the ListView (ListView1) foreach (DataRow item in dtInvoice.Rows) { MyTable.Rows.Add(item.ItemArray); } // This part just populates the DataTable (MyTable) dtInvoice.Columns.Add("Header1", typeof(string)); dtInvoice.Columns.Add("Header2", typeof(string)); dtInvoice.Columns.Add("Header3", typeof(string));

dtInvoice.Columns.Add("Header4", typeof(string));
dtInvoice.Columns.Add("Header5", typeof(string));
