Features Autocad supports AutoLISP, a programming language that can be used to interact with CAD and other drawing and technical features. Most version of AutoCAD use a proprietary AutoLISP application programming interface (API). This API allows third-party developers to access and manipulate the drawing features and objects. In some cases, AutoCAD's proprietary API also allows programmers to access and manipulate the drawing and its objects. Autocad uses object-oriented programming (OOP) for its CAD features. ObjectARX is a C++ class library which is used to create third-party extensions. ObjectARX is derived from AutoCAD's native API and shares the same core interface.

This allows third-party programmers to develop CAD applications which can interact with a basic feature set provided by Autocad. ObjectARX also provides a number of helper classes and methods to further facilitate programming. Viewing When Autocad is installed on a Windows platform, it has a default "AutoCAD" Viewer that runs on a local machine. AutoCAD 2010 also provides a web viewer. The web viewer is useful when the computer hosting the viewer is separated from the local machine running AutoCAD. It allows for cross platform drawing creation. Standards Autocad is based on the ISO/IEC standard, ISO
