FreeSpire - MPEG-4 Decoding Toolkit FreeSpire is a (mostly) open-source software MPEG-4 Decoding toolkit, which currently consists of three components: - DVD Parser (now obsolete) - written in C++, part of FreeSpire (mainly used for generating debug output) FreeSpire's DVD Parser was designed for the purpose of decoding MPEG-4 video streams in files. It decodes one audio/video bitstream per frame.

The decoder can be easily adapted to decode MPEG-4 streams embedded in ISO files, as found on CDs, DVD-Rs and other data media. It has no hardware requirements, apart from a 32-bit CPU and some RAM. FreeSpire's support for the IFO file format is mainly for the purpose of producing menus, and is unsupported and not part of the decoder. FreeSpire supports many different audio, video and subtitle tracks, as well as companded audio and video. In the current version of the

A ball points your direction and shows you the day/night status of the world. It displays the images in the specified time zone and area, which can be set to North or South pole (to have a top view of the world), North America (to see the day/night status of the US), India (for the day/night status of India), China (for the day/night status of China), Europe (for the day/night status of Europe), Africa (for the day/night status of Africa), South America (for the day/night status of South America), Antarctica (for the day/night status of Antarctica) or a pre-defined area and time, such as December 30, 2006 23:59:59 (to see the day/night status of December 30, 2006 23:59:59). The images are generated using the satellite API from the GeoEye-1 satellite at 1m resolution and converted to PNG format. This screensaver is fully compatible with Windows Vista. GlobeSaver is a utility that shows the night and day areas all over globe.. This utility is written as part of a windows screensaver, which is still under development. You can use it though to see how the globe looks at any time today, in the future or in the past! Features: A "normal" globe with an open overlay from the top down.. In addition to a normal globe, a 3D-dome map with the same closed overlay from the top down. The number of days (or months or years) that can be stored. It is recommended to store them in the form of numeric values instead of images. Notice that the screen space is not unlimited. The size of the images and the overall screen resolution is limited by the hardware available to you. This may mean that the number of days to be saved is even smaller than the size of the images. The "current day" text can be changed to any other date by using the form editing options of the screensaver (for example to have the current day on the 14th day of the month you'd need to enter 14 instead of current day in the "Current Day" text box). Works under Windows 95/98/Me, Windows NT/2000, Windows XP and later. System Requirements: PowerPC Widescreen display with 16-bit color support Free Disk Space: Free disk space is recommended to be at least 1 GB. If your disk space is less than this, the available space for the globe images will be reduced, which means that you can store less days (or months or years) in it. Help: This screensaver requires additional operating system specific drivers. If you encounter problems with the drivers, or if you are not sure whether your drivers are missing or not, you can download the most recent driver from the manufacturer's web site. Contact: This screensaver is under development and therefore the public information available on it is limited. If you have any questions or problems with the screensaver or anything else, please send us an email using the form on the home page of the web site.1. Field of the Invention The present invention relates to a method of manufacturing a semiconductor device, and more particularly, to a method of manufacturing a semiconductor device having an embedded gate. 2. Description of the Related Art As known semiconductor devices are becoming more highly integrated, there is a need for the formation of a thinner gate insulating layer, a thinner gate electrode, and a thinner channel region of a transistor. As the thickness of the gate insulating layer and the gate electrode is reduced, it becomes more difficult to properly etch the gate electrode, and particularly, the sidewalls of the gate electrode. Accordingly, a new process has been developed to etch the sidewalls
