More Material Properties: Use the Material Properties dialog box to make textured surfaces appear as if they were 3D objects, such as shiny plastic or wood. Wireframe Mode: Draw your 2D or 3D drawings as 2D and use the Wireframe rendering mode to see them as 3D. More Quick Parts: Create objects with any of your favorite forms, such as boxes, circles, lines, and arcs, and use the Quick Parts tool to start drawing them. Color Scales: Take control of the appearance of your drawings with color

scales. The default 3D colorscale is the one that scales across the drawing, but you can also assign a 2D color scale that will scale only within the viewport.

Color Scales: Use color scales to add more flexibility and control to your designs. Easily control the distance of a color scale (scale or detail, including alternate shades of the same color) and the change in value. **Color Scales:** Apply color scales to objects and selections in the drawing. **Complex Blending:** Use the Easing option to create an ease in or out transition between the old and new values. This new feature provides you more control over your easing transition. **3D Drawing Feature-Richness:** Create

Cylinder, Cube, Spheroid, and Cone objects. Draw 2D and 3D floor plans, elevations, and perspective views. Add adjustable feature properties, such as the number of edges and vertices. Add dimensions and datums for your designs.

Application Panel: Keep your favorite features in one place with the new application panel. Add or remove any features. Also add custom menus to your panel.

Tabular 2D Drafting: Use the latest Tabular 2D drafting features in your drawings. The simplest way to switch between the old and new drafting features is via the drawing task bar.

Multi-User Support: Draw your designs with and against multiple users. Easily

navigate the drawing with the context sensitive editing feature. Give and receive feedback while collaborating. Enable or disable features quickly. Use the new annotation tool and the Quick Parts and Material Property dialog boxes, and manage all of your user licenses in one place.
