In 2017, according to the IDC, AutoCAD was the second-largest design software market worldwide in terms of sales, falling just behind AutoCAD LT. The graphic software is used by architects, engineers, mechanical engineers, product designers, and architects, among others. The software is available as part of the AutoCAD product suite or as a separate, standalone app. In 2018, the IDC announced that AutoCAD LT was the fourth-largest CAD software market worldwide, overtaking AutoCAD, along with other parts of the AutoCAD suite, is available from Autodesk's website. History During the 1960s and early 1970s, as computer hardware advanced and user demand for graphics increased, CAD became a more desirable and necessary skill for a variety of disciplines. In the 1970s, most CAD systems ran on mainframe computers became more affordable and the price of mainframe computers declined, CAD programs became more popular. AutoCAD, initially conceived by Steve Baer in 1979, is one of the first CAD programs to be developed and released for personal computers. Steve Baer, the director of product development for AutoCAD at the time of its release, described the program as "a full-scale, task-based CAD system" that allowed users to draw lines and sections and then edit these drawings, change the size of the objects being drawn, and manage the final drawing. Baer explained, "The key was that it had a very simple UI and an extremely robust modeling engine. It made the ease of use of the software very apparent." AutoCAD was designed with the idea that users would use it instead of a hand-held device. The drawing can be exported to a variety of file formats, including DXF, DWG, DGN, and IGES. AutoCAD was initially available for the Apple II, Atari 800/800XL, IBM PC compatible, Macintosh, and IBM PCjr. In 1984, the software was released for the IBM PC/AT and the Apple II. The Microsoft Windows port was released in 1985. In August 1986, AutoCAD since then, such as AutoCAD

In 1996 the utility PTFACE was developed as a batch process editor. In 1998 it was rewritten as the freeware AutoCAD R14 face setting program PTFACE. This program allows users to create and apply standard faces to AutoCAD drawing, or create their own standard faces. It is notable that this original program was written as a 16-bit program, and remained 16-bit compatible until it was rewritten to its current 64-bit system interface. In 1998 Autodesk introduced the first add-on for AutoCAD. In September 2000, Autodesk announced a total of 17 extensions developed by 16 companies. In May 2001, Autodesk launched the Autodesk Exchange for add-ons, which allowed developers to post their add-ons and customers to download them. The first addition of the software in 1999 was the "AutoCAD Map Builder", which was a mapping utility. In 2000 "AutoCAD Mapper" was released. Autodesk introduced the first AutoCAD Web Services API in 2002. In 2009, Autodesk launched the Open Platform for developing applications and solutions. It allowed developers to write and run applications in either JavaScript or Python. In addition, the integrated development environment, including the application development toolset, can be customized to match the needs of individual developers. Extensions and tools Extensions There are two ways to develop an extension: The standard Autodesk Extension Manager which allow users to download pre-made add-ons to AutoCAD, or write their own. These add-ons from Autodesk Exchange, which includes many utility applications and standard add-ons developed by third-party Autodesk customers. Users can also create new add-ons themselves. AutoLISP—user-written add-ons that are written using the AutoLISP language. Users have to use this extension, unless their application is written in AutoLISP. The main benefit of the Autodesk Exchange for add-ons. This allows developers to post their add-ald647c40b
