membrox. Permission is NOT mine. Q: Replicate two features with a close P1 value I am looking for a way to duplicate 2 features for both P1 and P2, if both features have a close value. From the table below it would mean that I can place feature_1 in P1 and feature_2 in P2. This is a very simple example, but is this possible? The main problem is that I don't know how to replicate a value if there is something close to it (but not exactly the same). Thank you, Feature_1 Feature_2 Distance 0 0 0 NaN 0 1 1 NaN 1 0 1 NaN 1 1 0 NaN A: You need condition to use only features with close distance values and reshape by stack; np.random.seed(123) np.random.seed(456) L = np.random.randint(0,2
