Security Auditor is the tool to gain full access to your Computer system including authorized and unauthorized users, software installed on it. It's a network security audit software that detects and enumerates all user accounts and software installed on your system. With Security Auditor, you can know the user accounts on your computer by listing them or you can show the user accounts in a tree view. When you are using different software, you can show the installed software as a tree view or list. It provides security information including:

- ☐ User accounts
- ☐ Software installed on your computer
- ☐ Available and used disk space
- ☐ User account control

You can do system harddisk scanning and schedule the scan. The software runs in stealth mode while its network activity is hidden. You can schedule the

scan to run automatically. During the schedule period, the software scans system and checks for any missing software. After the scanning is completed, the software shows the list of missing or unused software. It also shows a list of files that are not used by the system. You can specify the scan period, scan frequency, scan mode, and folder list. The user account control information includes:

- ❑ How many concurrent users a user account can have
- ❑ How many login attempts are allowed to a user account
- ❑ How many logout attempts are allowed to a user account
