- Very intuitive user interface - Able to edit a wide variety of maps in various file formats - Easy to use - Powerful features - Works on any Windows platform - More than 50 maps included - Designed for beginners and advanced users - Customizable - Easy to edit, save, and create - Reposition and zoom in and out - Useful functions A map layout of a complex geography can be difficult to understand. It may require a lot of time, manpower, and money to deal with. In such cases, mapping software can be a real help for the project. In the long term, it is crucial to choose a quality tool that can assist you in your mission. Extracting Data from Maps The first step is to identify which parts are important for your research. The most difficult part of the extraction process is to know where to look first. Once you know the boundaries of your research, you can use any of the following tools to extract the data: GIS Toolbox If you have a GIS (Geographical Information System) at hand, you will be able to use it to analyze the data that you have extracted from a map. Shapes A list of features can be saved in order to be used later. Data can be extracted from the different types of map files such as JPEG, GIF, JPEG, EPS, JPEG, SVG, PNG, TIFF, MIF, JPEG, EPS, MAP, PGM, or ASCII. Raster You can import a map and extract the data from it, in the form of a raster image. Table You can export the data of a table as CSV, HTML, or XLS. Viewer A viewer allows you to view the location of the objects in a map, but you need to have a certain amount of hardware to implement it. It is also important to know how to create the different view types in order to understand and manage the data that you have extracted. Mapping Software Mapping tools are very useful to locate the exact position of a target, and to highlight its features. A list of features can be saved in order to be used later. Data can be extracted from the different types of map files such as JPEG, GIF, JPEG, EPS, JPEG, SVG, PNG, TIFF, MIF, JPEG, EPS, MAP, PGM, or ASCII.

**What's New In?**

GPSMapEdit is a lightweight application designed to help you view and check out the contents of GPS maps in various cartographic formats. It sports a clean and straightforward layout that gives users the possibility to "drag and drop" the items directly into the primary panel or use the built-in browse function. GPSMapEdit offers support for a wide range of file formats: ARD, BIN, CRD, ECW, GDB, GPX, JPEG, MAP, NTM, WRT, and others. Other important options worth mentioning enable users to import information from MDB, SHP, MIF, CSV, or OV2 file formats, create a favourites list, rotate objects, create points, trim the map, measure the distance between points, remove duplicates and routing nodes, convert labels, merge inner polygons, edit postal address, and reset external nodes. Last but not least, you can zoom in or out, change the map skin, show the ruler, grid, polygon contours, labels, routing nodes, vector map objects, and coverage area, as well as view a list with waypoints, tracks and routes. Plus, you can create bookmarks and insert notes, perform tests to find the shortest or fastest path, select the measurement units for distance, elevation, Azimuth and area values, highlight addresses and route classes, as well as perform basic editing operations (cut, copy, paste, or delete). During our testing we have noticed that GPSMapEdit carries out a task quickly and without errors throughout the entire process. All things considered, GPSMapEdit offers useful features for helping users manipulate geographical data in a clean environment and is suitable for beginners and professionals alike.
