PixFix is a free photo recovery software. It allows you to recover files (pictures, videos) from formatted computer hard drives, camera memory sticks, SD memory cards, USB memory sticks and CF memory cards, even when the files have been deleted or overwritten. PixFix combines the following functions to recover deleted or corrupted files. Free scanner: scan hard drives, memory sticks, SD cards, USB sticks and CF cards to recover deleted or corrupted photos. File system utilities: open any drive or memory stick, as well as recover any files that were changed or format the memory, to recover deleted or corrupted photos. Data recovery: save photos recovered from hard drives, memory sticks and SD cards in JPEG, TIFF, GIF, or BMP format. If I say that I'm a web developer and that I want to fix their site, will they assume I'm trying to hack their site? It just seems a little weird to me. A: It's quite possible that they may think you are trying to hack their site, in which case what you should do is have your local live site ready to be deployed to their server at the same time as you demonstrate your web development skills. Personally, I would expect that a web host would be pretty resilient to such attempts and that their site should be fairly easy to hack, but that's just me. #### What's New in the PixFix?

PixFix is a freeware disk scanner for Windows which has been specifically designed to recover deleted photos from damaged or deleted hard drives, USB memory sticks and camera memory cards. The main goal of PixFix is to scan the critical files such as photographs from corrupt, damaged or deleted hard drives and recover the original files from the most difficult and costly situations. With PixFix you will be able to recover your photos, music, documents and other important files from hard disks with no problem. NOTE: If you are using some memory cards such as CF card, EMCC, MD, MS or MSR cards etc., you should know that the used memory cards (SD cards) must be formatted in FAT32 or NTFS system partition before the scanning process. PixFix has come with a lot of professional scanning algorithms, which are capable of finding images, documents and music files that other scan utilities like Recupera Recover or Recuva are unable to find. The main differentiator of PixFix is that it is able to locate and recover many additional files.
