Drawing Objects Mainly shapes, lines, arcs, text, picture, layers, layers' objects, dimensions, and 2D & 3D coordinate data. Dimensioning Dimensions can be placed anywhere on a drawing or with predefined options. Layers Layers are collections of objects grouped by function. Layers are especially useful for organizing and manipulating drawings and dimensions. Text Text can be typed directly or entered from a file. Raster and Vector Graphics The Raster (image) type is used for images, maps, and images of mechanical parts. Vector (2D or 3D) is used for most drawing types, including electrical and structural components. Vector (2D) and 3D vector graphics are called 2D and 3D. Functions Toolbars and drop-down menus. A toolbar is a collection of toolbars. Some of them are attached to specific objects. Other objects' toolbars may not be attached to specific objects. Geometry The Geometry object is used to control and manipulate geometric features. Filtering While a drawing can be filtered to display only certain objects, groups of objects, or attributes of an object, the filtering can be extended to view information about the objects. Extensible Window System The Extensible Window System (EWS) allows you to design a custom window that can be reused throughout multiple drawings or components. You can design a custom EWS by subclassing the Extended Window Toolbar or EWSWindow and implementing the functions and properties of the toolbar. Notes Notes are useful for recording information about objects, including comments and dimensions. Crosshair The Crosshair is useful for selecting objects. It can also be used to assist in locating objects by showing a crosshair cursor when an object is selected. Protect The Protect function allows you to lock objects so that they can be changed by only users who have the correct security clearance. You can protect drawings by marking objects in a particular layer as protected. Text editors The Text editor is useful for creating and editing text. Collaboration Collaboration is the ability of more than one user to work on a drawing at the same time. This can be done in a group or in an Internet-based "cloud" that allows multiple users to work on a file without having to upload their changes to a central server. DocEdit The DocEdit object is used to create and maintain documents. Annotations Annotations may be used to annotate or comment on a1d647c40b
