Buildings In AutoCAD 2010, for the first time, architects and other building information modeling (BIM) users are able to create a fully functioning floorplan using the new Floor and Ceiling features. In addition, the ability to edit floor plans and view other floor plans as well as a number of other features and methods are being implemented for the first time in AutoCAD. This capability allows a floor plan to be created with 1D and 2D reference lines as well as room dimensions. Some of these capabilities are still in the development stage, but once available they will let users produce a functioning floor plan in a fraction of the time it currently takes to do so in a 3D modeling application. Graphical user interface Autodesk acquired a Canadian user interface design firm, Graphic Interface, to revamp AutoCAD's interface and make it more user-friendly. On August 22, 2008, AutoCAD LT's interface was updated and the new interface was made available for all AutoCAD versions.
