The only caveat with this is that it seems to throw an exception if there are no sub-directories. If there are no sub-directories then this line of code throws an exception. How can I make this line of code not try to throw the exception and just wait for it instead? I have tried doing this: System.IO.Directory.GetDirectories(rootDir) try { // if there are no sub-directories then do something. } catch { // do nothing. } but that won't do the trick since "System.IO.Directory.GetDirectories(rootDir)" doesn't throw an exception either. Does anybody know how to make this line of code not throw an exception when there are no sub-directories and just wait for that to be discovered? A: Use a while loop: while (System.IO.Directory.GetDirectories(rootDir).Length == 0) {
