* **GIMP:** An open source alternative to Adobe Photoshop, GIMP also creates and manipulates raster images. It is web-friendly and can be run using a web server or local server. It also includes a variety of special effects and filters. * **Online:** Apps such as Canva, tineye, and Visme are web-based and free. They allow you to edit multiple images in a very short amount of time. They look like traditional photo apps that support layers, but they are very user-friendly. ## The PSD File Format After you create your Photoshop document, it's saved as a Photoshop Document (PSD). The PSD document is comprised of layers, which are Photoshop's way of adding color overlays and filters to your image. A PSD document can also have a background, images, and other components that you want to add to the document. Each layer is made up of objects, colors, and shapes, which you can manipulate. When you make changes to a layer, they are saved as a change set. Change sets can be combined to form the original, starting point of the document. The key to making your edits the way you want is in the layer. You can make multiple adjustments to a layer. A layer can also have multiple masking layers, which are used to hide parts of the image while leaving others visible. * * * # Changing and adding layers You can add layers to an image, which are slightly different from traditional layers. They are not as easily created or manipulated as they are with layers; however, they have more flexibility. Layers are created by the picture, while layers are added to a picture. Layers make it easy to make changes or even edit the picture. For example, you can add a new layer, change its opacity, apply a layer mask, and even change the layers' path. You can use the Move, Resize, and other tools to move layers around. Once you add a new layer, it floats on top of the others and you can't add anything else to it. However, once you add a layer mask, you can alter the layer as you wish, thus creating an illusion of a different layer beneath. In addition, you can apply filters to your layers that can remove portions of the image. * * * * * * # A global layer does

Q: How to configure classic ASP from IIS 7 using Web Reference I want to configure a classic ASP application from IIS 7 using web reference. I have a sharepoint project where I'm using IIS 7 to host the application. When I try to access the application using the applet, the ASP application does not load, instead an error page is shown. Here are the steps I took so far: Configured IIS to sharepoint project folder Configured IIS to allow anonymous access Configured ASP to use Integrated Windows Authentication Configured basic authentication in ASP.config file Configured Web reference in app.config file When I try to access I get the following error: Protected methods in the derived class 'WebReference1' cannot be called Stack Trace: [ArgumentException: Protected methods in the derived class 'WebReference1' cannot be called] System.Reflection.Emit.DynamicMethod.CreateDelegate(Type type) +0 System.Reflection.Emit.DynamicMethod.CreateDelegate(Type type) +7 App_Web_WebReference1.Init() in c:\sites\Develop\build\app-master\bin\App_Web_WebReference1.ascx.cs:38 App_Web_WebReference1.LoadWeb() in c:\sites\Develop\build\app-master\bin\App_Web_WebReference1.ascx.cs:60 App_Web_WebReference1.Page_Load(Object sender, EventArgs e) in c:\sites\Develop\build\app-master\bin\App_Web_WebReference1.ascx.cs:76 System.Web.UI.Control.LoadRecursive() +59 System.Web.UI.Page.ProcessRequestMain(Boolean includeStagesBeforeAsyncPoint, Boolean includeStagesAfterAsyncPoint) +743 Any ideas about what I'm missing? microtiter well-based quantitative reverse transcription-polymerase chain reaction (qRT-PCR) assay has been developed for the detection of infectious bursal disease virus (IBDV) in field samples. The test is specific for IBDV and does not cross react with any other avian viruses. qRT-PCR is used to amplify a 348 base pair region of the IBDV VP2 gene in virus RNA extracted from samples. Once amplified, the PCR product is detected via real-time hybridization. The assay is specific for IBDV and only amplifies the IBDV genome sequence.
