AnkerCAD, a free building program, will let you generate 3D structures from simple building blocks. It will provide you with tools to build your own 3D house, vehicle, or just a simple cube. Choose from more than a thousand blocks and use them to build a structure, select your blocks and rotate them to a different angle. There are many images, music and sounds which can be previewed in advance. You can change the background canvas, camera angle and window background color easily. With detailed image effects, you can choose the desired window pattern, light pattern, and texture. You will also get the option of changing the rotation amount of the selected blocks, camera angle, saving a screenshot and taking a picture with your camera A series of texturing options will allow you to change the color of all elements of your creation and also the light, shadow and texture settings. You can combine all the selected blocks to create a 3D structure. You can also rotate and change the angle of each block. Choose from more than a thousand elements. Make your project your own and use 3D printers or CNC machines to create models from your own designs. The result can then be easily put together or used as building blocks for a larger and more advanced project. The program can be installed on multiple computers. How to get rid of the pop-up ads: Under "Settings" tab, you can choose to disable any single blocks or multiple blocks. You can also turn off the pop-up ads through the same tab. How to create animated 3D structures: Under the "Sound" tab, you can click on any buttons to trigger sounds and songs. You can select any button and increase or decrease the volume of the sound easily. This is an easy-to-use building program, which allows you to easily create models, create castles, cities, miniature towns, small vehicles and much more. There are also options to save the created projects and export them as image files. With these image files, you can easily edit the image files with graphics editors like Photoshop or Paint. Features: Choose from more than a thousand blocks All in all, more than a thousand building items are available for use, from simple cubes to cylinders, gates, and even stained glass objects. This ensures one has a wide range of choices when generating 3D structures. What's more, users can change the angle of the camera, for a better perspective on the project. The background canvas image can also
