Microsoft Office 2010 Primary Interop Assemblies Redistributable [Mac/Win]

When your product is developed for Windows Platform, there is a need to package up all the interop assemblies needed to use functionality that is part of Microsoft Office 2010. Additionally, other components are included that support the other Office 2010 apps (Visio, InfoPath, Project, SharePoint Designer, Publisher, Outlook) so that you can create the applications that are based on these components. This archive is the Redistributable file for the Primary Interop Assemblies. It is released for all the Office 2010 components, and not just the Primary Interop Assemblies. Microsoft Office 2013 Interop Assemblies Redistributable is a set of components that are designed to serve programmers in integrating various functionalities in their products. More precisely, inside this archive are enclosed the Primary Interop Assemblies for all the products that are part of the Microsoft Office 2013 edition (Word, Excel, Access, Outlook, Visio, Project, PowerPoint, Publisher, SharePoint Designer and InfoPath), as well as some additional ones. Microsoft Office 2013 Interop Assemblies Redistributable Description: When your product is developed for Windows Platform, there is a need to package up all the interop assemblies needed to use functionality that is part of Microsoft Office 2013. Additionally, other components are included that support the other Office 2013 apps (Visio, InfoPath, Project, SharePoint Designer, Publisher, Outlook) so that you can create the applications that are based on these components. This archive is the Redistributable file for the Primary Interop Assemblies. It is released for all the Office 2013 components, and not just the Primary Interop Assemblies. Microsoft Office Primary Interop Assemblies is a set of components that are designed to serve programmers in integrating various functionalities in their products. More precisely, inside this archive are enclosed the Primary Interop Assemblies for all the products that are part of the Microsoft Office 2010 edition (Word, Excel, Access, Outlook, Visio, Project, PowerPoint, Publisher, SharePoint Designer and InfoPath), as well as some additional ones. Office 2010 Primary Interop Assemblies Redistributable (3.1.2) is a set of components that are designed to serve programmers in 1d6a3396d6

Microsoft Office 2010 Primary Interop Assemblies Redistributable Crack+

MS Office 2010 Primary Interop Assemblies is a set of components that are designed to serve programmers in integrating various functionalities in their products. More precisely, inside this archive are enclosed the Primary Interop Assemblies for all the products that are part of the Microsoft Office 2010 edition (Word, Excel, Access, Outlook, Visio, Project, PowerPoint, Publisher, SharePoint Designer and InfoPath), as well as some additional ones. Usage: Download the MS Office 2010 Primary Interop Assemblies installer. Install the prerequisites. Unzip the archive in a folder where you wish to install the component. Run the installer. The Interop Assemblies allow you to create add-ins to Office, add-ins that do the following:

- Add special objects, like Charts, Diagrams, Graphics and Form controls, to Office applications.
- Provide custom controls that developers can add to an Office application.

The Interop Assemblies are different than add-ins that add special objects to an Office application. For more information about creating Office applications, including requirements, see the Windows SDK documentation. For more information about programming Office add-ins, see Programming Office Add-ins. Notes for Developers: There is a common API for programming Office 2007 and Office 2010 add-ins. However, not all of the features, functionality, and objects that are available for Office 2007 and Office 2010 are available in the Interop Assemblies. For example, you cannot create a table, a chart, or a graphic, with the Interop Assemblies. Also, in Office 2007 and Office 2010, there are special built-in objects, called Form Controls, that are not part of the Interop Assemblies. Therefore, you cannot create a new Form Control in an Office application by using the Interop Assemblies. For more information, see the Interop Assemblies documentation. Download Download the Interop Assemblies for Office 2007/2010. The Interop Assemblies allow you to create add-ins to Office, add-ins that do the following:

- Add special objects, like Charts, Diagrams, Graphics and Form controls, to Office applications.
- Provide custom controls that developers can add to an Office application.

The Interop Assemblies are different than add-ins that add special objects to an Office application. For more information about creating Office applications, including requirements, see the

What's New in the Microsoft Office 2010 Primary Interop Assemblies Redistributable?

This package contains the Primary Interop Assemblies required to execute Office applications from a .NET Framework-based application. These Primary Interop Assemblies provide the glue to integrate Office applications with the .NET Framework. The Interop Assemblies are designed for a single function, with the ability to be used by other applications. Please note that this package is designed to be used with Office 2010. Version 3.0.0.0
