...Q: How to save an embedded document in mongoose? Im using Node.js and mongoose.js in my project. I have the following schema definition: var userSchema = new mongoose.Schema({ user_id: Number, email: String, password: String, profile_picture: String, user_name: String, status: String }); // then I have the following post route definition app.post('/login', function(req, res)

```
{ var user = new  
user(req.body.user);  
user.save(function(err) { if (err)  
res.send(err); res.redirect('/'); });  
});
```

My question is: What is the correct way to save an embedded document that has all the required fields? Right now if I try to send the following payload with postman I get a 422 status code error.

```
{ "user": { "user_id": 2345,  
"email": "test@email.com",  
"password": "test",  
"profile_picture": "",  
"user_name": "Test User",
```

"status": "active" } } The 422 status code error is correct, because I do not have all required fields. So the question is: How can I save the document using the correct format that mongoose supports? A: In order to save embedded documents, you need to supply the collection name (e.g., my-user) in the schema definition:

```
var userSchema = new
mongoose.Schema({ user_id:
Number, email: String, password:
String, profile_picture: String,
user_
```

BTWatcher Pro 1.0 will be able to watch the live network activity of any BTWatcher enabled BT device. It will capture all new and modified files, stream to your PC all saved BTWatcher info and will keep the full history of all your BTWatcher activities.

btwatcherPro is not a add-on, it is a standalone software for Mac OS X. BTWatcher for Windows is capable of monitoring activity on the BT Discovery infrastructure.

This means it can display the connections, messages sent and received, and list of devices connected to BT Discovery servers in a specified area. You can change the display location, show a specific device or view only specific device information. BT Watcher allows you to see all information from the log file of any other BT Watch client or a nother BT device on your local network. Webmin - Free Web-based system administration tool
Webmin is a web-based system

administration tool. It allows you to manage your Apache, DNS, FTP, MySQL and mail servers through a browser. It supports many Internet protocols and is suitable for home, small business and large-scale corporate use.

Features: A web-based GUI

Supports many Internet protocols

A wide range of support available

Able to be completely managed

through the web Installation: The

download site contains two

versions of the program, either for

unix or for windows. If you wish

to use the windows version, you must download the bz2 file and then decompress it to a new folder, and then run the exe file, as below

Berenice (Nemean lion)
Berenice (, Bereníki, Bereníki Némēos, Βερένιχη) was a female Nemean lion of Greek mythology. Berenice was a princess of Cyrene in Africa, and the daughter of King Iolcus and Queen Hyperenor. A lover of the lion-slayer Laius, she encouraged him to impersonate her father, who was absent, and try to win her hand in marriage. Laius did so, and on the wedding day the bride-to-be

turned against her father, and slew him with a sword. She was then killed by Laius. A frequent source of offspring, Berenice
