What's New In Cassia?

Cassia is a .NET library for accessing the native Windows Terminal Services API. It can be used from C#, Visual Basic.NET, or any other .NET language. Cassia enables you to gain fine-grained access to several system services like the TSR Directory, Registry, and User Management. It enables you to create, manage, and use Terminal Services sessions for interactive sessions between client and server. Cassia is built on top of MSTSCLib which provides access to native Windows Terminal Services API. This allows you to control and monitor sessions on a Terminal Services Server. Documentation: If you want to know how to use Cassia, you need to know a little about Terminal Services and the Terminal Services API. We'll talk about the basics in this section. If you already know Terminal Services and the Terminal Services API, this documentation can get you up and running pretty fast. On top of the Windows Server 2008 R2 Operating System, the Terminal Services (TS) role is used to allow you to create your own Terminal Services servers. If you have a Windows Server 2008 R2 machine, you should know about Terminal Services. On a Windows Server 2008 R2 machine, you can install the role by right-clicking on the Server Roles node and then selecting the Terminal Services role. It is recommended that you have at least Server 2008 and Server 2008 R2 installed on your machine. Before you install the Terminal Services role, you should make sure that your machine meets all the requirements for Terminal Services. One of those requirements is that the machine must have a registered Terminal Services License. You can see if your machine has a registered Terminal Services License by looking at the properties of the Local Computer Role service. Local Computer Role Service If your machine does not have a registered Terminal Services License, you cannot use Terminal Services. Your machine must have at least one licensed Terminal Services server. You can get a copy of a Terminal Services License by clicking on Start, then in the Start menu, point to Programs, and then in the Start menu, point to Accessories, and then click on on Local Computer Role. You'll see the Local Computer Role Services window. In the left pane, click on the Local Computer Role service. On the right pane, select the License tab. You'll see a list of all the Terminal Services licenses on the machine. If you don't see a registered Terminal Services license, you can contact Microsoft about a new license. You can also find more information about Terminal Services at Microsoft TechNet. Terminal Services Role Version A new Terminal Services server for Windows Server 2008 R2 is not available. However, if you want to use a new Terminal Services Server, you'll need to install it on a machine that already has a registered Terminal Services license. It's also recommended that you create a new Terminal Services license because you might need to reinstall a Terminal Services Server

System Requirements:

OS: Windows 10, 8, 7, Vista, XP (32-bit or 64-bit); Processor: Intel Core i5-2400, Intel Core i3-2100, Intel Core i5-2500K, Intel Core i7-2600K, Intel Core i5-4570, Intel Core i3-3220, Intel Core i3-3225, Intel Core i5-4570S, Intel Core i7-4790,
