Thank you If you have been reading the press reports about Google's attempt to buy smart home tech company Nest, you've likely noted that the deal was shot down by the U.S. Department of Justice, and that the companies had reached a proposed settlement that would have left the deal intact and kept Nest as a Google subsidiary. The settlement, which was presented to the U.S. District Court of Northern California last week, appears to have pretty well settled the fight between Google and Nest for control of the smart home market. But with those details now public, one question remains unanswered: How will Google use the intellectual property of Nest, and is there more that Google could want to keep its Nest subsidiary under wraps? While it's unlikely that Google will reveal any new details about the Nest acquisition, the terms of the proposed settlement are a public record, and one of the takeaways could be the company's ability to access the IP of Nest. Under the terms of the proposed settlement, Google will be able to use Nest's IP for a period of three years, and that includes patents, trademarks, trade secrets and copyrighted works. What Google can't do is use the Nest hardware. But that could potentially pose a problem. Google already has a connected home device lineup that includes a Google-branded WiFi-only router, a smart thermostat and a smart smoke detector. As we've reported, the Nest thermostat has been a staple in the Google home lineup, and Google may not want to cannibalize its Nest business by expanding its existing lineup. That's where Nest's IP could come in. In the proposed settlement, Google is required to commit to licensing Nest'
