This version has been developed by N-Vox Ltd. Features: Oracle SQL Handler 3.1 is a powerful, efficient, integrated development environment for Oracle developers. Oracle SQL Handler allows you to write, edit, run and debug queries, DML, PL/SQL, SQL scripts, triggers and views. It provides a syntax-aware editor with syntax highlighting and code completion, and lets you modify the text, structure, syntax, source code, query parameters and any other value for the current query without affecting other queries. You can easily execute any existing query, modify its value or design new queries. When you run a query, the data of Oracle SQL Handler is directly inserted into the form of a query window, as it is displayed in the query editor. You can check the results before the query execution and modify the query result by using the data displayed in the query window. This lets you use the results of a query when needed, instead of executing queries just to see the results of some of the data. You can quickly get an overview of all the tables used in a query, view all the columns and sort by the different columns. You can also open any query, DML, PL/SQL, SQL script, view or trigger in the editor by selecting the project file from the solution explorer of the main window. You can also execute and debug a SQL script directly from the editor. Oracle SQL Handler allows you to edit SQL statements using the syntax-aware editor of Oracle SQL Handler 3.1. Syntax-aware editing means that each SQL statement is displayed in the syntax-aware editor, and it highlights syntax errors, keywords, operator and predefined functions, and it highlights the differences between SQL commands with or without the parameters. You can modify the value of the current SQL statement by simply clicking on a field of a column. Oracle SQL Handler lets you monitor each SQL statement that is being executed. This feature provides a display of the time required to execute each SQL statement. You can monitor the execution of any SQL statement, and can stop the execution of an SQL statement if it is still running. You can also modify the execution progress of the SQL statement. Oracle SQL Handler offers several useful debugging and server administration functions. You can set breakpoints, view runtime values and debug statements. You can also set values to queries. You can set constraints to tables and create triggers to automatically update the data. With this Oracle SQL Handler you can develop your scripts and create views more efficiently. You can design reports using the XLS Viewer feature or execute scripts with the XLS2Excel feature. Download: Oracle SQL Handler 3.1.
