Night Mode For Windows Crack + Activation Free X64 (Final 2022)

A portable application that allows changing the brightness level from the system tray To adjust the brightness level of the monitor This tiny app doesn't have a visual interface, but is suitable for lowering or raising the brightness level of the screen, bringing the light back to levels that are not too bright and discomforting. Features: Adjust the brightness level from the tray menu This small application goes right into the system tray area, where it waits quietly, ready for you to use it whenever you need to. Right-clicking on this icon reveals a menu that displays a list of the brightness levels available, from 0% to 100%, with a 5% step. By default, when launching Night Mode for Windows, the monitor is set to 60% dimming level. You can change that by adding an argument in percent (without "%") when running the application. To control the brightness level with key combinations This tiny application has been designed for quickly dimming the screen, but still it also allows you to increase or decrease the brightness level of the monitor, leaving it between these two brightness levels. CTRL+WIN+F11 to decrease brightness, CTRL+WIN+F12 to increase brightness, F9 to maximum dim the screen, F10 to change brightness to maximum. Limitations: Free application, no limitations Note: This program is free to use, but is a tiny application designed to help you dim the screen, by adding to your system tray the "Night Mode" application icon. Minor limitations: It only changes the brightness level of the screen, and not the color temperature level. This application cannot add consistency to what is standard in Windows settings. This program has not been tested in all versions of Windows, so always make sure that the program is tested and fully compatible with your Windows version. Bottom Line: This little application has been designed to keep the brightness of the screen on a level that you find comfortable during the night, preventing you from eye strain. As such, it is a useful application in time when you are frequently working in front of the computer for long hours during nighttime. And thanks to the little size of the Night Mode for Windows utility, you can carry it around on your laptop or USB drive and use it on the go, without affecting the registry of the host system.

Night Mode For Windows With Serial Key Free

1. Adjust the brightness level from the system tray 2. Implement a silent dimmer, or even change the brightness value of the screen as desired 3. Adjust the brightness of your computer's display, and control it via the keyboard Post navigation About Author Charles Kornelis Publisher Apprentice Get more similar software Useful software Windows 10 Edition Info Office 365 Edition Info About us PostEco is a project of PocketEco. Night Mode For Windows

A lightweight application which not only darkens your computer screen, but also allows you to adjust the light level. Set it up for your viewing comfort. Works with all Windows versions from XP through Vista No need to uninstall Runs on any 32-bit or 64-bit Windows system Controlled via the key combination Ctrl+WIN+F10 and Ctrl+WIN+F11 The online manual is available Requires no additional driver How to Use Run the Night Mode for Windows Installer for the first time. It will prepare your system for Night Mode's use, then make the necessary registry modifications for maximum efficiency. The software will always run on a "Run" basis, no need to reboot the PC. If you want to run Night Mode as a portable application, open the executable folder and double-click "Night Mode.exe". Once the program has finished loading, it will run in the system tray. Settings and Configurations Available Presets There are some preset preferences you can set on the Night Mode for Windows defaults. By default the brightness level is set to 40%, it is possible to change this to any percentage level ranging between 0 and 100%. The Night mode can be set to turn on whenever the computer is put to sleep, or to turn on and off automatically. You can also choose to have the Night Mode only work on a specific display, or on all available displays. By default the color contrast level is set to auto. However you can choose to have the color contrast level fixed at "low", "medium" or "high". The Night mode can be set to work in Windows' log-in screen. The Night Mode can be set to only work for the shutdown, hibernate, and sleep screen. The Night mode can be set to work on one, or all of your displays. By default the black backlight setting is set to off. The Night mode can be set to turn on when the screen is locked, or turn on and off as the user logs in and out. Some Other Options Sometimes there is a need to tweak some settings. Once you are done tinkering you can save the preferences with the Save As option available in the menu. For example, some users

What's New In?

Night Mode for Windows is a small portable app for Mac OS X and Windows that makes it quick and easy to dim your screen backlight from 0% to 100%. When you open Night Mode for Windows, it goes straight to the tray and you can use it to quickly dim your monitor and keep your eyes happy. Night Mode for Windows is a portable app as mentioned above, so it is a great app to carry around with you and use whenever you need to dim the screen in your laptop or desktop PC.
