Screen Recorder is the most popular desktop recording software for PC users, allowing them to record videos of their computer desktop or any Windows desktop screen. It can be used to record videos of your computer desktop and take snapshots of the Windows desktop. It is a free screen recording and screen capture software, which means it is freeware. It can help users to record videos of their computer desktop or the screen of any Windows desktop including mouse, cursor movement, window movement, keystrokes, etc. In addition, Screen Recorder can also record your voice. If you want to record web cam videos, you can use it too. It can save your recording as a movie, a video, an AVI file, a MP4 file, a 3GP file, or a WMV file, with various video or audio settings that you can choose. With Screen Recorder, you can capture your desktop or any other part of the screen to any format you like. So, you can save your

own videos on your computer to your PC, mobile phone, digital camera, or other portable device. Screen Recorder has built-in video editors, tools, filters, effects, and dozens of functions, which can let you edit your own videos. As a result, it can be a very good and popular screen recording software for recording videos and editing videos. The main window of Screen Recorder is a simple area which displays videos, snapshots, and properties of all recording files. You can easily organize the videos you want to record. It is very useful and easy to use. You can easily use the big picture window to preview your videos or snapshots, and the hotkeys are easy to use. You can set screen recording as a background task, and use the hotkeys to pause and stop the recording. It can be used to record videos of your computer desktop, taking snapshots of the Windows desktop, or capture the mouse movements, the cursor, window movement, keystrokes, etc. For screen recording, you can use Screen Recorder to record your own screen, take snapshots of your desktop, or record the screen of any other computer on the network, including other computers on a network. With this program, you can also record the video of your PC screen, including your own voice, without any delay. The built-in editor of Screen Recorder can make videos, even edit them. You can cut off or split the videos, adjust the video quality, set the frame rate of the videos, the brightness and the contrast, etc. You

- While configuring settings, you can switch to several other areas like general, video, and audio. These can be used to set working folder, whether or not to capture cursor, display flashing rectangle while recording, or configure video and audio quality settings and format. - A single AVI file is generated by default, but you're always asked where the new file should be placed. However, if you don't configure the work folder and pick a different destination, recordings don't appear in the main window navigation panel. - However, editing leaves a lot to be desired, with your only management options represented by cut. This can be used to chop off unnecessary parts, or split the whole video recording in multiple parts. - The video comes out under the AVI file by default. Luckily, a built-in converter can be used to transform it to a trending GIF file, or SWF animation. Although you get to stick your nose in video quality settings, there's something particular about results that leaves room for improvement, both before and after conversion. - On an ending note Taking everything into consideration, we can say that aSkysoft Screen Recorder doesn't really bring anything new on the market of its kind, and neither does it manage to impress through outstanding features. It generally feels like an unpolished result, with most functions being rather confusing even to trigger, and not to mention the mediocre output quality of videos. - User Rating: 2/5 6,745 A simple button on your
