SS Header is a small and reliable tool that allows you to establish a custom Internet connection via proxy servers. The software enables you to manipulate HTTP headers by entering a series of requests and expected responses, or by filtering the received responses. You may also enable several types of queries. Proxy servers are generally used as an intermediary between your station and the Internet provider in order to hide your IP address. You may thus protect your anonymity while navigating the Internet and make it more difficult for your activity to be tracked. SS Header allows you to establish a connection to the Internet via a proxy server by specifying its address and the dedicated port. The application can monitor the speed for uploads and downloads while the connection is active, as well as allows you to customize the server configuration. Thus, you may enable or disable multi-bug option or the FIP usage. Moreover, you can specify which methods you wish to apply for each of the aforementioned options: front, back, payload or query. HTTP header manipulation tool SS Header allows you to specify a series of HTTP headers in the request column, as well as in the expected responses. You may enable or disable a particular header at any time. The filter tab is dedicated to creating certain rules for header responses. For instance, you may skip the responses from a particular header or string, as well as replace request and response headers. IP acquiring and route diagnosis SS Header is a small application, it can help you easily create a secure connection to the Internet via custom proxy servers. The software allows you to enable queries or start the IP hunter function. Additionally, you may customize the connection profiles in the SSHE launcher or add routes, view details and configure the IP in the Simple CMD window.
