Autodesk AutoCAD is a commercial CAD software application from Autodesk. It was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. I recently had to create a new portal from scratch and AutoCAD's portlet architecture was a refreshing alternative to a more traditional Java-based solution. So this tutorial demonstrates how to create a simple portal using portlets with AutoCAD's new architecture. In this tutorial you will learn: Introduction to the Portal Architecture In order to create a portal using the new AutoCAD architecture, you will need to understand how ports work and what they can do. The main idea of portlets is to enable you to add functionality to AutoCAD's user interface by installing and configuring a portlet. A portlet is a port of a pre-existing web technology, such as Java. Portlets are included as a component of a portal, and their functionality is controlled by a portal manager. When you load a portal, the portlets within it behave the same way as regular components on your desktop. You can modify their behavior and see their output via the portal manager. Creating Your Portlet Project Before you start your portlet project, make sure you have the latest versions of AutoCAD and any related software. You will need the following prerequisites: Java Portlet XML Portlet API AutoCAD and AutoCAD LT Source SDK Portal SDK Release mode of your choice (this tutorial will be for a standalone application) The source code will be available for download after the tutorial is complete. Note: If you do not already have AutoCAD on your computer, you can download AutoCAD LT for free at www.autodesk.com. 1. Create a New Project To begin, create a new project in AutoCAD in R14. Set the project type to a standalone application and choose a name for the project. The name of your project will be displayed in the project folder. Open the project properties. Click on the Switch to New Users icon in the top right of
