The.exe file is a simple application (no dependencies, only 1. the compiled files and 2. any other tools that will be used by the program) that will convert any number (text file, stdin or from the command line) into bytes. It accepts hexadecimal, decimal and octal. The program was designed to be used with big files (i.e. it takes longer than a simple conversion to print the full file) and should not be used for small files. One of the main features is that it accepts (and fully supports) multiples of 16 bytes to store, hence you can easily multiply and divide the binary number. The program is written in ANSI C and uses the CLibrary. 1. Where you need a fixed string containing a multiples of 16 bytes that is later multiplied and divided with the first input (big file). 2. where you want to convert a string containing the binary number to bytes. 3. Where you want to test some number using the binary representation stored in the string, the binary representation of which is stored in the string 4. Where you want to convert a string containing a binary number into a number. 5. Where you want to convert a string containing the binary representation of a number to an int. 6. Where you want to convert a number into a string that is in the binary representation. 7. Where you need to save the number in a file. 8. Where you need to store a number in the file, in the binary representation. 9. Where you want to save a number in a file, but store the binary representation of it in a string (therefore you need to convert the binary representation to bytes). ## What's New in the?

Hex2byte is a command line application that converts a hexadecimal formatted number from a file or standard input into a file or standard output. The format is controlled by you. This includes character sets, decimal, octal and more. Hex2byte is not designed to be a replacement for functions like printf or fwrite and should not be used as such. Hex2byte cannot correctly convert numbers in some cases. If Hex2byte does not understand a number it will correctly return the original number.
