## FolderISO

It's an easy and fast way to create an ISO image of your local files. No special software is required. Extract ZIP files Extract EXE files Extract files from ISO images Create ISO images from CD/DVDs and other sources As a matter of fact, it doesn't matter how your data is stored on your hard disk. It can be text files, PDF files, image files, archives or even whole folders. But before you can start the process of creating an ISO file, you need to decide which format you want your data to be saved in. Is it a PDF file? Do you need an archive? What kind of compression do you need? All these questions will be answered by the application you're using, and in case there's no suitable option, FolderISO will happily take your decision on its own. Obviously, there are several compression types, but the most useful for most users will be the UDF format. UDF is a disk-level format that's universally supported by virtually all modern operating systems, and allows for an efficient compression of the file's data. Of course, the fact that it's designed for disks does not mean that your PDFs or other files will be saved in the same way. For example, in the case of PDF files, you will end up having two copies of your data on your hard drive, as the final file will be created on your hard disk and also compressed using this format. In this way, you can enjoy the benefits of a UDF-based compression, since it will allow you to compress the data in multiple layers to increase the compression ratio. While a UDF-based format will not be the best choice for ZIP or EXE files, you will have to work a bit harder to find a UDF-compatible application. Indeed, many files are compressed using Zip or EXE file formats, and FolderISO doesn't offer a separate option for this. Still, if your data is stored on a CD, DVD or other media, you will be able to use the UDF format. In this way, you can burn your files to a CD or DVD, and when you insert it on a computer, it will be recognized as an ISO image, and your data will be visible on the disk. To create an ISO image from a CD/DVD, simply select the disc
