Microsoft SQL Server Migration Assistant for Oracle (SSMA for Oracle) is a client for the Migration Wizard that is designed to help migrate data in a database between a Microsoft SQL Server and Oracle

database. Migrate data between databases This SQL Server client is designed to migrate data between a Microsoft SQL Server and Oracle databases, so it can be used to perform data conversions between SQL Server (all versions from 2012 to 2019) and Oracle 7.3 and higher. For example, data can be migrated from SQL Server to an Oracle database, from Oracle to SQL Server, from

one SQL Server version to another SQL Server version, from SQL Server to Azure SQL Database, and between SQL Server and Azure SQL Data Warehouse databases. This software utility is completely compatible with the standard Migration Wizard in SQL Server 2012 to SQL Server 2019, not to mention with the Oracle data migration tools. The Oracle tools support both

the ODBC and JDBC interfaces. You can control the migration in two different ways, either using a Wizard-based UI or a set of command line parameters. Migrate SQL Server to Oracle SSMA for Oracle migrates both databases (like Table Relationship Mapping Wizard in SQL Server) and data (for example, the conversion of tables, columns, and the like). In fact,

you can copy and paste the SQL queries that should be run to migrate data between the two databases into the SSMA for Oracle client and run them there. The tool performs automatic checks and suggestions of what objects should be copied from one database and what objects should be imported from the other. In many cases, you don't actually have to do anything, as

the tool makes it all for you and provides the necessary suggestions. Prepare for data migration The tool is designed for the following situations:

- Transfer data from SQL Server to Oracle databases
- Transfer data from Oracle to SQL Server databases
- Copy your database schema to a new SQL Server database
- Define the steps of data migration between SQL Server and Oracle

The Oracle

tools support both the ODBC and JDBC interfaces. You can control the migration in two different ways, either using a Wizard-based UI or a set of command line parameters.

Obese people in general are at increased risk of developing GERD. However, the question of whether these patients have an increased risk of refractory symptoms, complications and an impaired quality of life compared with nonobese patients has not been adequately explored. Studies suggest that the pathophysiology of obesity is linked to an alteration of the
