Create and manage virtual data safes that are invisible and impossible to break or steal. Start encrypting data on any computer you use in a few minutes! Features: Create safe on current computer only (portable), external drive or cloud based Create invisible safe, name it whatever you want, leave it on a pen drive or USB stick and use it anywhere you like Security: Use long and secret passwords, keep them on a remote computer, encrypt them in the cloud, leave no trace of them on your computer Friendly user interface: The tool features a clean layout, is fast and has a good response time Multiple ways to create and manage safes: You can start and close a safe from the context menu of a safe in the main frame, or via the SLE file Various tools to work with: Use the context menu of safes to select, edit or delete them, configure their security and mount them as a disk or drive Main features of Steganos Safe Cracked 2022 Latest Version: Fast and intuitive to use. You can start and close a safe in a few clicks. You can make a safe invisible. It is located on any volume, flash or pen drive, or even an image. Add a password to the safe. If you have the password on a remote computer, it will be used to encrypt data stored in the safe. Data encryption: Use a long and secret password to encrypt data stored in the safe Advanced encryption technology: Use AES256 for symmetrical encryption, PSS algorithm for asymmetrical encryption Safes are easily movable. You can put them on a remote computer or a pen drive or image, and copy them from one computer to another. You can mount a safe as a removable disk, so your data and applications will run on any other computer without difficulty. Safe files and settings are isolated from each other, so there is no chance of your settings, configuration and data getting mixed up. Mount and use safes on multiple computers. You can export your safes, make them invisible, password protect them, and share them with people and groups of users. Safe files can be kept safe in the cloud as well, so you can access them from anywhere. They can be backed up too. Safe files are secure and private. They are invisible on your desktop, they do not show up in Windows Explorer, and are not listed under Common Files. Safe files are easy to mount. Simply copy them to a remote or local volume
