On the other hand, you should keep in mind that you need to take the time and configure the application so that each feed is automatically collected into its corresponding directory. The data is stored in multiple databases, an option that can help you manage free space on your local drives. To be more efficient and set the app to process the information automatically, then you need to combine rules with actions. As you probably hinted, actions have the role of

assigning, copy, move or change items' properties. Another of the very good and easy-to-find features of Zoot is the possibility to generate a configuration file that will be required to make the process work. As for the main advantages, you should know that the tool is used to collect, categorize, process and organize large amounts of data and is not a tool to manage to-do lists. For instance, you can use Zoot to process the information available on many channels, from

newsgroups to social networks, forums, blogs, wikis, RSS feeds, IM contact and email. RSS feeds support To get the best out of Zoot, it's a good idea to be aware that you can collect data from RSS feeds. In this case, you will have to register a feed and then be able to start collecting data from the RSS feed you have just registered. How to use: Once the application is installed and setup, you can start collecting data from RSS feeds using your currently stored subscriptions. But first, you need

to create a settings document that contains the feed list. From there, you can start using Zoot. The setup consists of three

In this paper, we address the problem of static document analysis, namely the identification of the gender of writers in a text corpus. To achieve this goal, a dynamic document-semantic processing framework called Genessy is proposed, which includes the definition of domain-specific constraints for the identification of male and female writers. These constraints are derived from two sources: (i) linguistic annotated corpora built from written documents, and (ii)

an expert system that models the writing style of different gender groups. The framework allows the integration of document corpora for the identification of a given domain and the definition of domain-specific constraints. This paper details the implementation of Genessy, followed by an analysis of its accuracy. The experimental evaluation of Genessy has been conducted on two corpora: (i) a corpus of 7,261 business letters, and (ii) a corpus of 1,000 samples of newspaper

articles. Results confirm the accuracy of Genessy for the identification of the gender of writers. Abstract The recent news about the COVID-19 outbreak is particularly tragic, since it appears that there are no known cures. Although the main approach to the treatment of such an epidemic is based on prevention, there are some compounds that are suitable for treatment at the moment. In our work, we will analyze the effect of these treatments on COVID-19 patients. This study is

based on the infected human body model developed in \[[@CR10]\]. The lung cells of the human body that are infected by the virus stimulate the production of various inflammatory mediators, including cytokines IL-1b, IL-6, IL-8, TNF-α and interferon IFN-γ. This causes the body to produce an increase in macrophage number, leading to increased expression of the intercellular cell adhesion molecule-1 (ICAM-1). This will make the infected cells more recognizable to T-cell

receptor (TCR) molecules, which will lead to the activation of them. Once activated, the T-cells will help to eliminate the virus in the body and help the damaged lung cells heal \[[@CR3]\]. In this work, we will provide an updated evaluation of the effects

Prey Visuals Quality Templar-class Mission Appearances Starting out with the first few encounters with the survivors, you'll be assigned to the other members of the team. To move on with your first mission, you'll need to survive all of the encounters with the survivors and get a "mission ready" status in your weapon schematic. You can get a bit of help by having extra teammates, but you'll need to
