This is a save editor for the PAYDAY 2 video game, it currently only supports the retail PC version. All data types, encryption, hashing and encoding have a .crc file of 36,000 bytes. The format is used to protect sensitive data in different cases. For example, if credit card information is transmitted over the Internet, then the .cbr file format is used to protect the information. It includes data on purchase history, contact information, and so on. This information can be stored on removable media (flash memory, hard drive, etc.) or in electronic form (for example, using a cloud service). The open .fs format is common. It is used to store information about system usage. In addition, there is an .img format. This is the most generalized storage of data that is transmitted to the Internet through the servers of file sharing services. To store this information, a free FTP client, the so-called timeout program, is used. Among the file storage software, there are giants such as Microsoft, Apple, AOL and others.
