Submitted: 20 May 2008 The software has been in active development since 2003, with new features added. It has been available for free downloading until the last two years. This software allows you to simply use a USB Joystick connected to PC as a USB Mouse and simultaneously as joystick. This feature is available on all modern operating systems, (WIN 7, WINDOWS 8, MAC OS X, LINUX and more). The software will detect your USB joystick and forward the input to your PC as if the mouse was connected to it. (but the joystick is being used as the mouse) You can connect the USB Joystick using any of the following methods: 1) By plugging the USB Joystick to any port of the computer. 2) Using a USB hub device. 3) Using a power adapter and a USB hub. 4) Using a Firewire device. This software will work on any USB Joystick model that conforms to the USB specification, The use of the USB port is simple: The joystick needs to be plugged into a USB port. The USB Joystick is automatically recognized by the computer. The USB Joystick you are using is detected by the computer as a connected mouse. The USB Joystick can be used as a regular keyboard (entering your normal keyboard commands.) The software works on all modern operating systems. This software only attaches itself to the USB ports. There is no need to install additional software in order to use the USB Joystick. The software is automatically recognized by Windows (after a Windows restart) and Macintosh. There is no additional driver necessary. There is no need to install additional software in order to use the USB Joystick. There is no need to install additional software in order to use the USB Joystick. There is no need to install additional software in order to use the USB Joystick. There is no need to install additional software in order to use the USB Joystick. There is no need to install additional software in order to use the USB Joystick. There is no need to install additional software in order to use the USB Joystick. There is no need to install additional software in order to use the USB Joystick. There is no need to install additional software in order to use the USB Joystick. 1cb139a0ed
