1. The MACROs are extension to the standard Outlook Express menu and Inspector menu. 2. The MACROs are

very easy to implement. You can simply embed them directly into your add-in without any requirements of programming. 3. Each MACRO is represented by a class. You can use either the object oriented programming or the procedural programming. The procedural programming requires a little bit more work than the object oriented programming. 4. The class in the TMenuItem class is called a "virtual class". It means that the class works similar as a reference class. It is stored in the Add-in Express, but can not be instantiated. You can only use the class methods, i.e. the attributes. The "Add-in Express" is the only place where this class has the right methods and attributes. 5. The MACROs consist of a class and an ID to identify the class. The ID is written in the extension of the macro. It is simply used by the Add-in Express to find the right instance of the class. You can use the TObject method for this. 6. The object-oriented programming of the macro is optional. There is no need to use the object-oriented programming. You can do it either way. 7. You can develop either the object-oriented programming or the procedural programming. It is up to you. 8. The Add-in Express provides the Visual Studio.NET with a mechanism to change the menus of Outlook Express. You only have to modify the.DMI (Dependant Menu) files of the project. 9. If you want to embed some menu items for the Inspector

menu, you must provide the.DMI file. 10. The.DMI file is provided with the Add-in Express, the Visual Studio.NET and the project. You can copy the file from there to your project. 11. The file extension of the.DMI file must be.DMI or.DMIX. If you use.DMIX, you have to make sure that you use the "Add-in Express for Outlook Express" version 6.1 or later. 12. The file is interpreted by the Visual Studio.NET. If you change the.DMI, you have to change the files of the Visual Studio.NET. 13. You can use the TMenu and TToolbarItems classes in your project. 14. You can put the menu items 1d6a3396d6
