Free download and software reviews, How to download, Top applications and games, free download, PC games, Windows and mac software.Reliability of the Seated Sprint Test and the Vertical Jump Test. The Seated Sprint Test (SST) and the Vertical Jump Test (VJT) are sports performance tests that have been used in research and clinical settings. The purpose of this study was to determine the test-retest reliability of these measures using measures of minimal clinical important difference (MCID) and smallest worthwhile change (SWC) among collegiate volleyball players. Seven female and 5 male collegiate volleyball players (mean ± standard deviation, age: 22.8 ± 3.1 years; height: 1.65 ± 0.06 m; mass: 62.7 ± 7.2 kg) volunteered to participate in the study. Measures were taken 2-4 days apart. Minimal clinically important difference (MCID) and smallest worthwhile change (SWC) values for the SST (SSTMCID and SSTSWC) and VJT (VJTMCID and VJTSWC) were calculated using a standard error of measurement of 0.5% and 0.33%, respectively. MCIDs and SWCs for the SST and VJT were, respectively, 0.80 and 1.03 and 1.00 and 1.36 meters. SSTMCID and SSTSWC were 0.60 and 0.99 and 0.67 and 1.31 seconds. VJTMCID and VJTSWC were 0.83 and 1.30 and 0.88 and 1.39 seconds. Intraclass correlation coefficient (ICC)
