Cobian Backup 2022 [New]

Cobian Backup is a reliable software solution designed to back up your files either on the local computer or onto another system in the network. Of course, just as expected, there are multiple backup modes supports, including full, differential, incremental and dummy, with dedicated settings for each of them. But first, a few words on the interface. Although the application is supposed to address such an important

task, Cobian Backup is pretty intuitive and sports a well-organized look. It shows all details of a new task straight in the main window, but also offers access to all of its features with just a single click. Setting up a new task is very easy; the app enables you to configure the files or folders you wish to backup, as well as to enable Volume Shadow Copy, use file attribute logic or create separate backups using timestamps. Of course, you

have to specify the source and the destination, and, if you wish, enable the scheduler and provide the days of the week, date and time to perform the operation. You also have the option to use archives and choose 7z or ZIP compression, along with password protection, encryption and split settings. Last but not least, you can configure file exclusions and other tasks to be performed before the backup begins. Cobian Backup boasts a very

rich settings menu, with configuration options regarding the engine, compression, functionality, visuals and FTP. In addition, the application supports remote backup and comes with a dedicated tool to remove old backups and to show the backup history. As a conclusion, Cobian Backup is one of the best software solutions when it comes to backing up data and one of the few that provide so many features inside such a friendly

environment. Cobian Backup

Key Features: * One-click wizard to backup your files or folders * Backup your files to a DVD * Backup files to a network location * One of the most intelligent data backup software * Backup system-wide, selected items, and folders * Image backup to create an image of a system or a disk * Supports scheduled backups * Compress backup with ZIP or 7-Zip * Supports password protection * Fast and light *
