Supramolecular ensemble mimicking the ribonuclease activity of the KlenTaq enzyme. The well-known amino acid sequence, His-Glu-Gly-Gly-Arg (HEGGR), found in the α -helix region of the KlenTaq enzyme, was shown to serve as the recognition motif for an ionic complex formed by the KlenTaq enzyme and protonated anionic metallosupramolecular catenanes. By using a photolithographic method, we herein have generated well-defined supramolecular catalytic species formed by self-assembly of the HEGGR motif and different metallosupramolecular architectures. The molecular design was intended to mimic the α -helix structure of the KlenTaq enzyme. The formation of the catalytic assemblies was demonstrated using 2,2'-bipyridine-1,1'-bis(4-aminophenyl)tetra-acetate as the templating molecule. Both self-assembly and the digestion by the HEGGR motif were monitored using electrospray ionization mass spectrometry (ESI-MS). These results not only confirm the idea of using the HEGGR sequence as the recognition motif for self-assembly of metallosupramolecular architectures but also show the self-assembling capacity of the supramolecular catalytic species towards the enzyme substrate.1. Field of the Invention The present invention relates to a self-propelled vehicle having at least one engine-driven transmission in a power train which is arranged in an interior of the vehicle, for driving an axle differential for two drive wheels. 2. Description of the Related Art There are vehicles that are equipped with a motor-driven axle differential with a driven differential carrier and a planetary gear unit. The driven differential carrier is driven by a motor, which in turn, is supplied with energy from

Preliminary layers can be automatically managed for you. Use the user-defined data format or a type of CAD data file. AutoCAD 2023 supports AutoCAD LT data files, and now you can create EPS, PDF, DWG, or native AutoCAD LT files. (video: 1:16 min.) Ink and type conversion in AutoCAD LT 2018 and 2019 made the drawing process more flexible. In AutoCAD 2023, the application can now convert drawings into other formats, including PDF, EPS, DWG, or AutoCAD LT. Numerous Improvements to Drafting and Printing: You can now save printed labels with your object and annotation information and then send the saved file to a laser printer or other compatible devices. It's now easier to quickly create label sheets from a set of AutoCAD drawings and transfer annotations to printed labels. The number of labels in a sheet is now unlimited. You can now define the location of a colored point, line, or marker using a text box. You can also create markers with the old-style arrow or set up a customized Marker Style. Annotations in the Add Object dialog box can now be automatically updated as you edit your drawing. The Time toolbar is now lighter and more compact, with buttons that are easier to see and use. The Data Management palette in the Ribbon now has a unified appearance and size across drawings and templates. The Chart of Accounts dialog box includes an Inventory header that displays the starting point of your accounts and the current stock levels for each item in the accounts. Customized output formats can now be assigned to drawings and templates.
