Getting Started With Photoshop The most recent version of Photoshop, version CS6, was released in October 2015. If you don't have CS6 you can find older tutorials that target CS4 and earlier as well as a tutorial that targets Photoshop 6 for Windows users. For Mac users, this tutorial is backwards compatible with Photoshop CS5 users. You can skip to the next sections if you are using Photoshop CS6. Adobe Photoshop CS6 - Introduction Adobe Photoshop CS6 has many new tools and features, including an new interface, GPU-accelerated editing, multiprocessing, layer masks, batch processing, and Smart Sharpen. In previous versions of Photoshop, the professional version of Photoshop required a 3.6 GHz Intel Core 2 Duo processor with 2 GB RAM or better to use the full feature set of the program. With the release of Photoshop CS6, however, Adobe has announced that Photoshop's professional versions are now GPU accelerated, making it possible to have Photoshop run on a range of processor speeds and types. See "What's New in Photoshop CS6" for more information about the release of the program. Photoshop still remains a powerful image editor, but it is a very complex editor. It still requires a good understanding of how layers and masks work along with knowing how to use the shortcut keys and tools. Start with a tutorial that uses layers and masks and then proceed to the next section for more advanced features. Creating a new document The starting point for a Photoshop project is a Photoshop file, or a Photoshop document. Creating a new document is a good place to start. You have the ability to save new Photoshop documents and to use different file types. Each Photoshop file type has different characteristics, which will be discussed throughout this tutorial. To create a new document, open Photoshop and choose File>New. Or if you prefer, you can choose File>Open and navigate to your Photoshop document and double-click on it. A new Photoshop document opens with the "Untitled (1)" placeholder. Choose File>Save to save your document and give it a name. Choose File>Save As. You can also use the shortcut key combination Ctrl+N (Windows users, Ctrl+N) and then choosing File>Save As to save a new Photoshop document.
